¹ The consumption and emission values shown were determined according to the statutory legal measurement procedures. The fuel consumption and emission values shown are based on the Worldwide Harmonised Light Vehicles Test Procedure (WLTP). Further information on the WLTP measurement procedures can be found at <https://www.genesis.com/uk/en/wltp.html>. Due to the more realistic test conditions, the fuel consumption and CO₂ emission values measured in accordance with the WLTP are often higher than those measured according to the NEDC.

² The electric energy consumption, charge time and performance figures may not reflect real life driving results, which will depend upon a number of factors including the starting charge of the battery, accessories fitted (post-registration), variations in weather, driving styles and vehicle load. The optional equipment you have selected during configuration may result in your configured model corresponding to a different approved vehicle type than a vehicle without the optional equipment. This may also cause deviations in the values for the configured model.

³ Only with 350 kW ultra-rapid chargers which are not widely available in the UK.
